#### Windows

On win11, visual studio runtime is required. See [here](#) how to install that.

#### Linux

We recommend that you first try to install TeXstudio from the repository of your distribution. Only if TeXstudio is not available there, use the following pre-packaged versions.

For Ubuntu, a PPA is available: [PPA](#)

Furthermore, an app-image is available which can be run on any platform: [applimage](#) (). Just make the file executable and run it.

Builds for other architectures (ARM, PPC) can be found directly on the OpenSUSE build service: [OBS](#)

#### Gentoo Linux

Packages for Gentoo Linux built are by the Gentoo community. They are available from the [official package repository](#).

#### Linux AppImage

[AppImages](#) are binaries that are packaged with all their dependencies and should thus run on any Linux desktop system.

#### Mac OS X

Platform	Version	Type	Size	How to install
11.7+	4.5.1	dmg	42.7 MB	<a href="#">download</a> , and start it. Please note: Because we do not have an Apple Developer Account, OS X may complain about an <b>unidentified developer</b> and deny opening TXS. In that case, open the context menu on the TXS icon (Ctrl + Click) and select open.
10.x				There is no release for macOS 10.x, but you can compile it from source or using homebrew.
